

Independent R&D of Silicone Roller, Only The Best for You-----DMAIS

As we all know,

Laminating is important to protect and weatherproof posters, banners etc.

What are the benefits of laminating?

Lamination protects prints

It preserves them

Deepens and brightens colors

Keeps creases and wrinkles to a minimum

Makes prints more durable and water resistant

Weatherproofs prints

Prints can be overlaminated or encapsulated (laminated on both sides) using hot or cold adhesive laminates.

Technical Parameters

Model Number	DMS-1600A	Roller Diameter	130mm
Nominal Voltage	220V/110V	Raise height of Roller	30mm
Heating Power	1500W	Temperature	0°C-60°C
Frequency	50-60HZ	Weight	160kg
Laminating Width	≤1520mm	Pressure Adjustment	Pneumatic
Laminating Speed	0-8m/min	Product Size(mm)	1980×570×1240
Laminating Thickness	≤28mm	Packing Size(mm)	2090×690×680

Equipment Features

1. Unique method of putting film from the back, easily operate.
2. Unilateral linkage , up and down easily.
3. Two laminating ways: auto/foot control.
4. With reversing function.
5. Only need one person to operate.
6. Infrared ray control temperature, much precise to control temperature.
7. Heating to 60°C to avoid bubble thoroughly.
8. Uncovering backing paper and finishing products automatically.
9. High efficiency and high yield of laminating, whole film of 50m don't bevel.
10. Film and paper tightness-degree system make the cold lamination have good tension, reduce the risk of laminating fold.
